

Tutorial para inicializar o WIPED

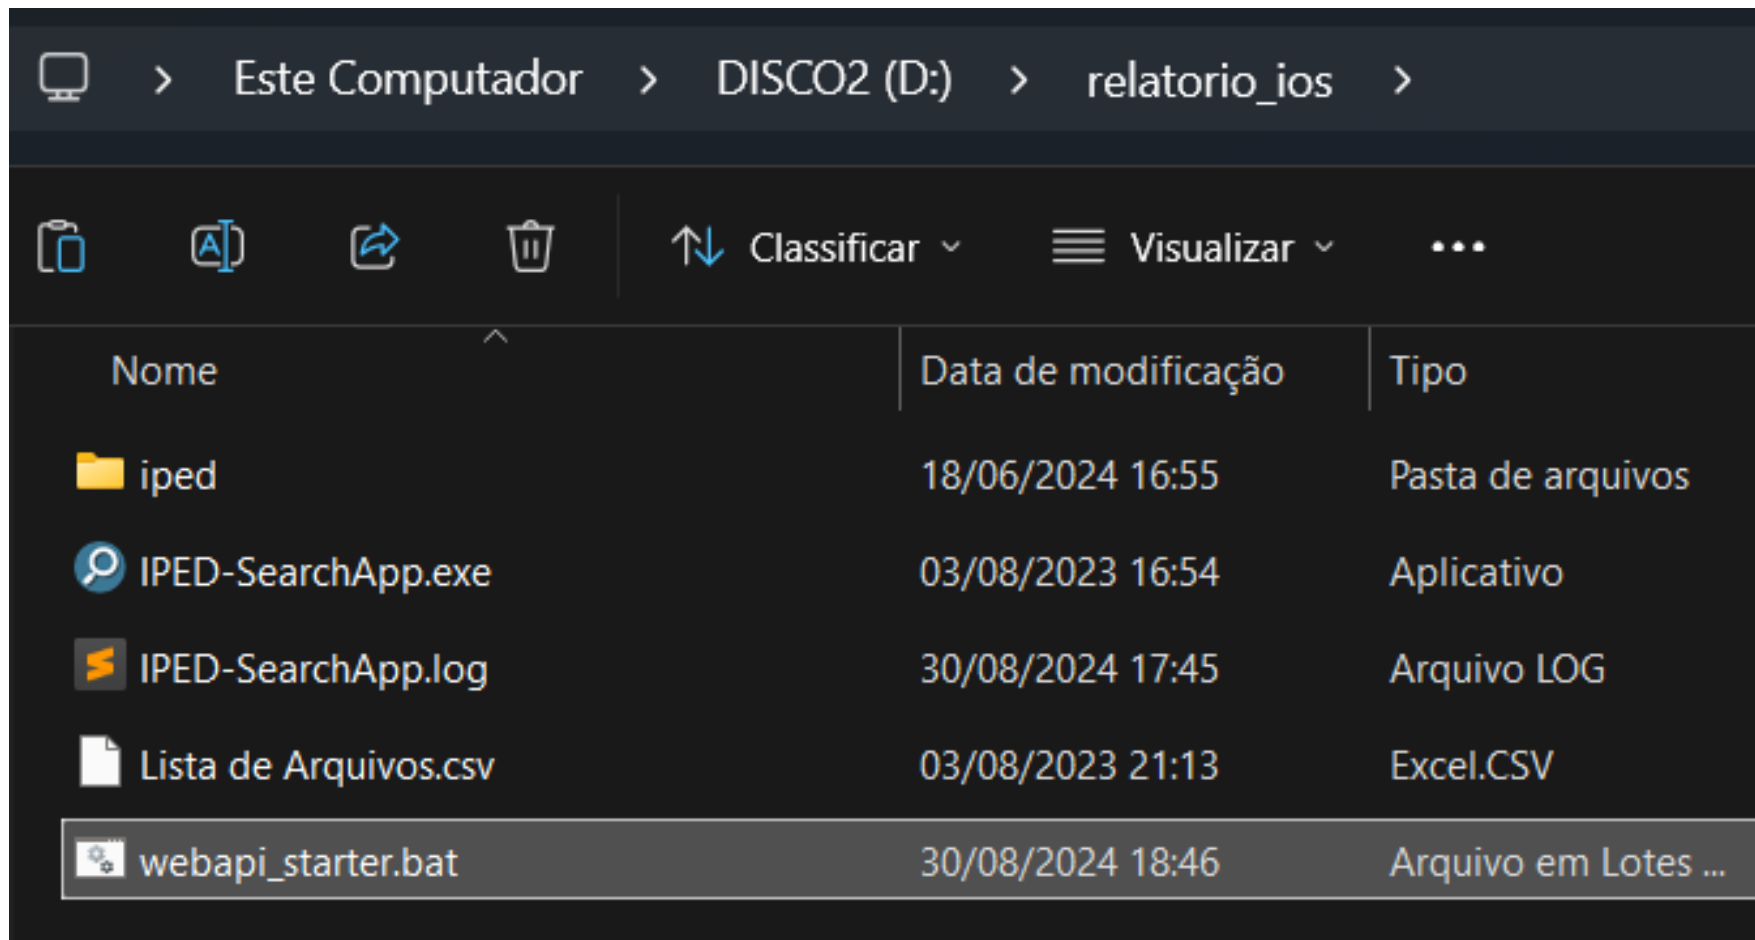

- Acesse a pasta do seu caso onde está localizado o arquivo **IPED-SearchApp.exe**

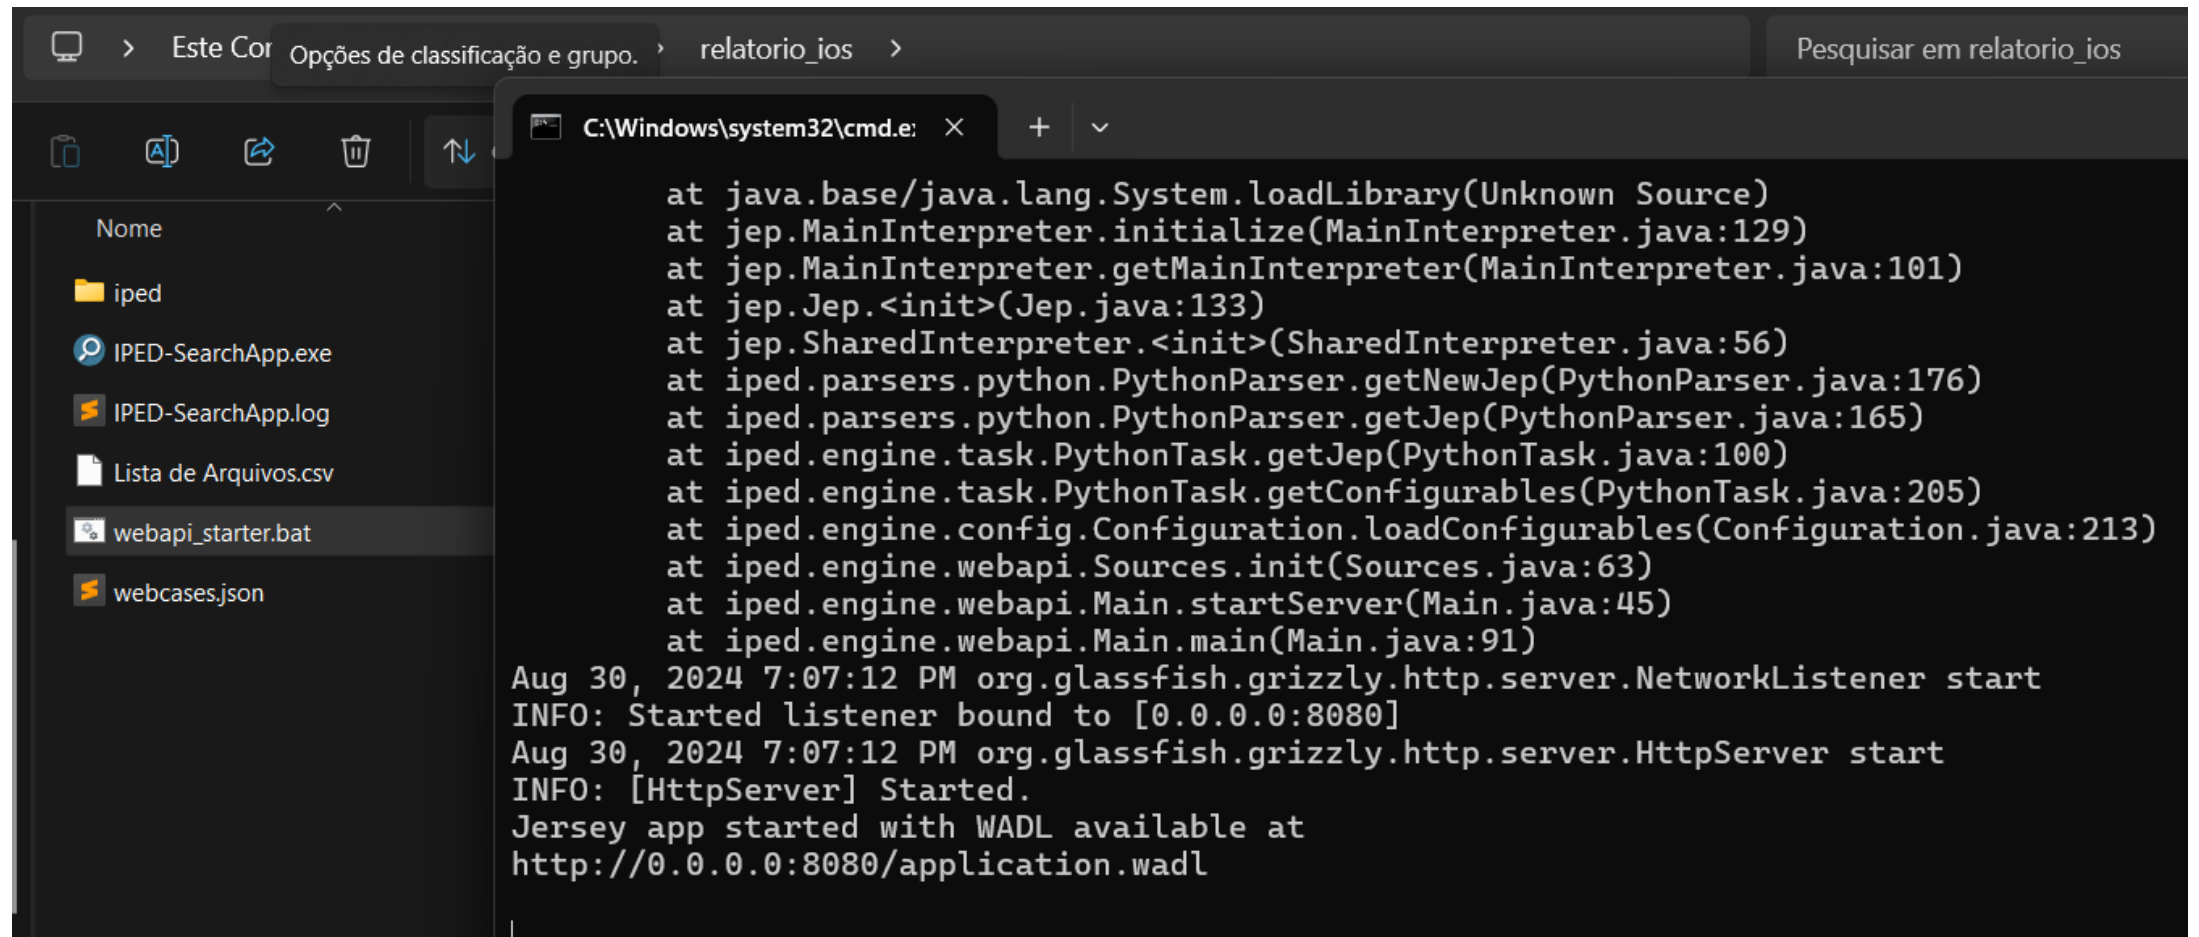

- Cole o arquivo **webapi_starter.bat**

Execute o arquivo **webapi_starter.bat** dando um duplo clique com o mouse ou apertando **enter**.

O terminal do computador vai abrir e executar os comandos necessários para iniciar a API web do seu caso.

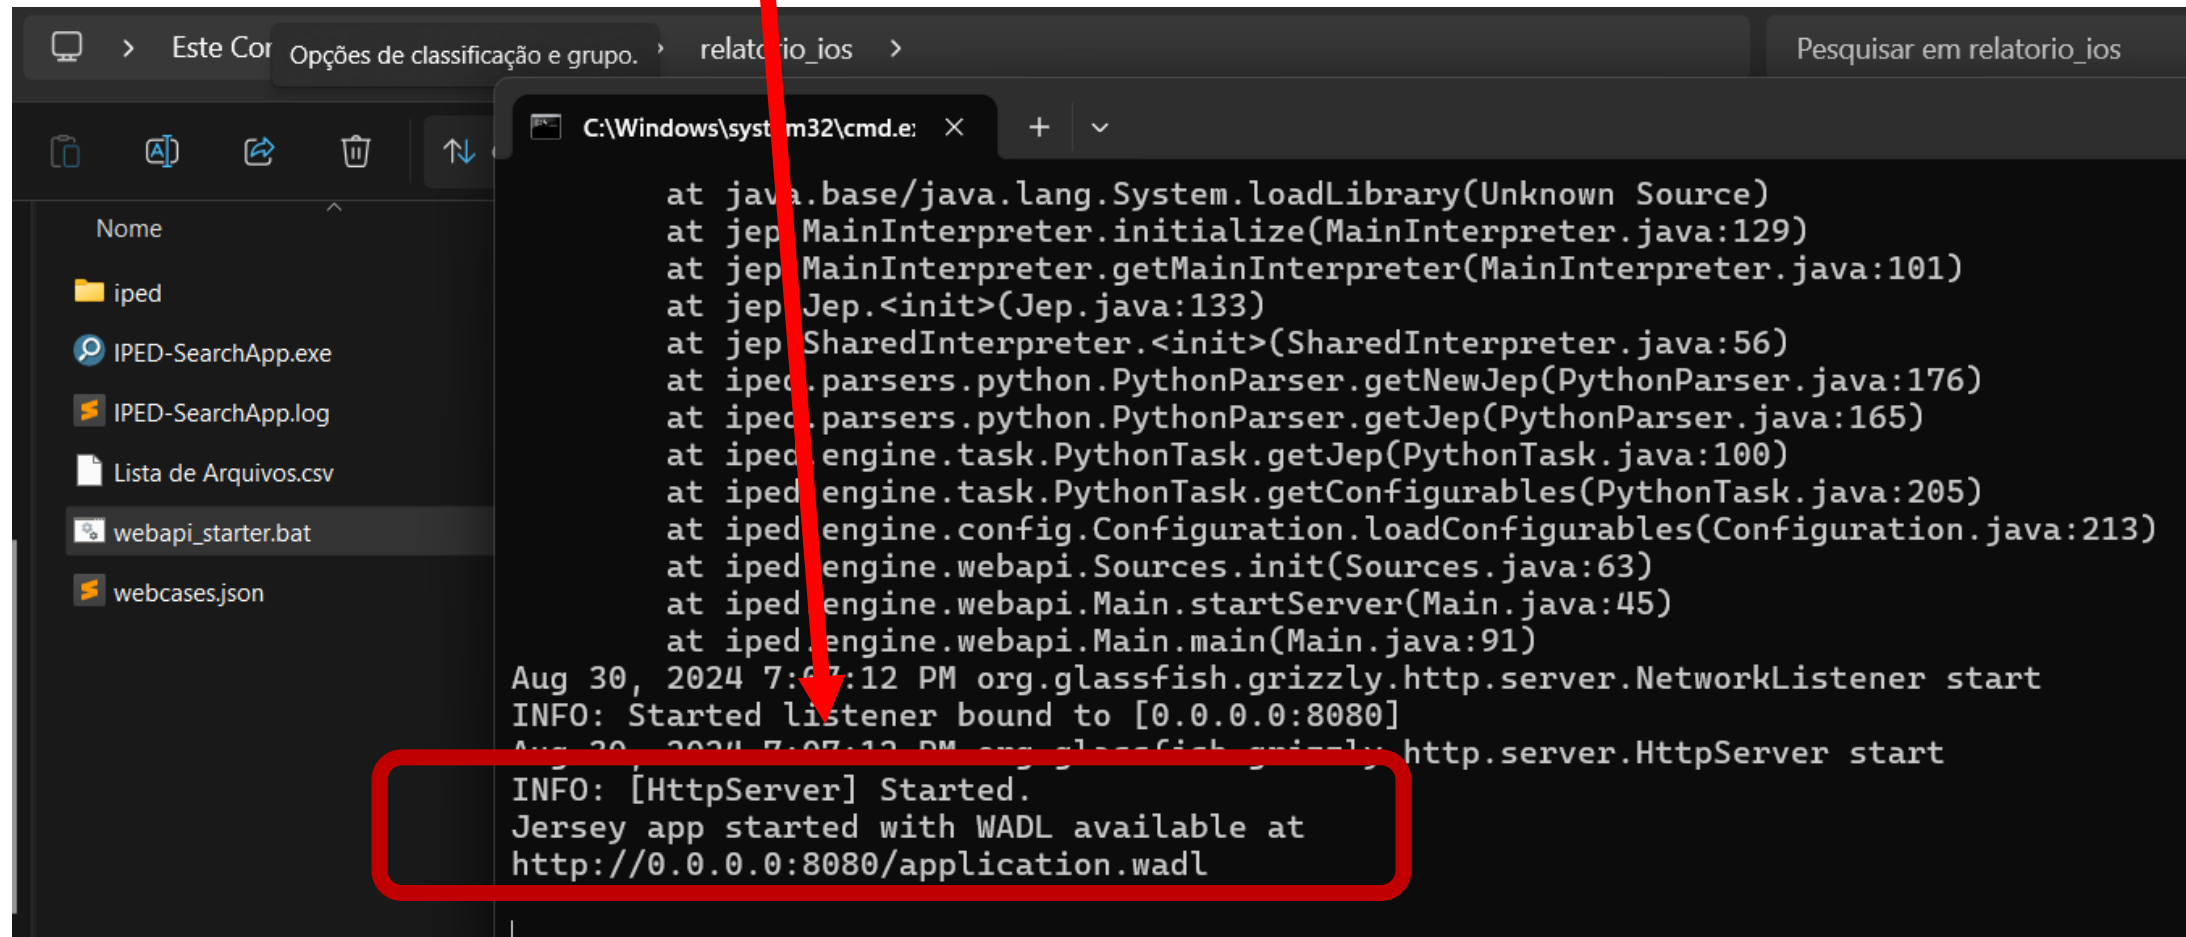

The image shows a Windows File Explorer window in the background, displaying the contents of a folder named 'relatorio_ios'. The files listed are 'iped', 'IPED-SearchApp.exe', 'IPED-SearchApp.log', 'Lista de Arquivos.csv', 'webapi_starter.bat' (which is selected), and 'webcases.json'. In the foreground, a Command Prompt window is open, showing the execution of the 'webapi_starter.bat' file. The output of the command is a series of Java stack traces followed by log messages indicating that the application has started successfully on port 8080.

```
C:\Windows\system32\cmd.e: x + v

Acesse a pasta do Nginx e execute o arquivo **nginx.exe**

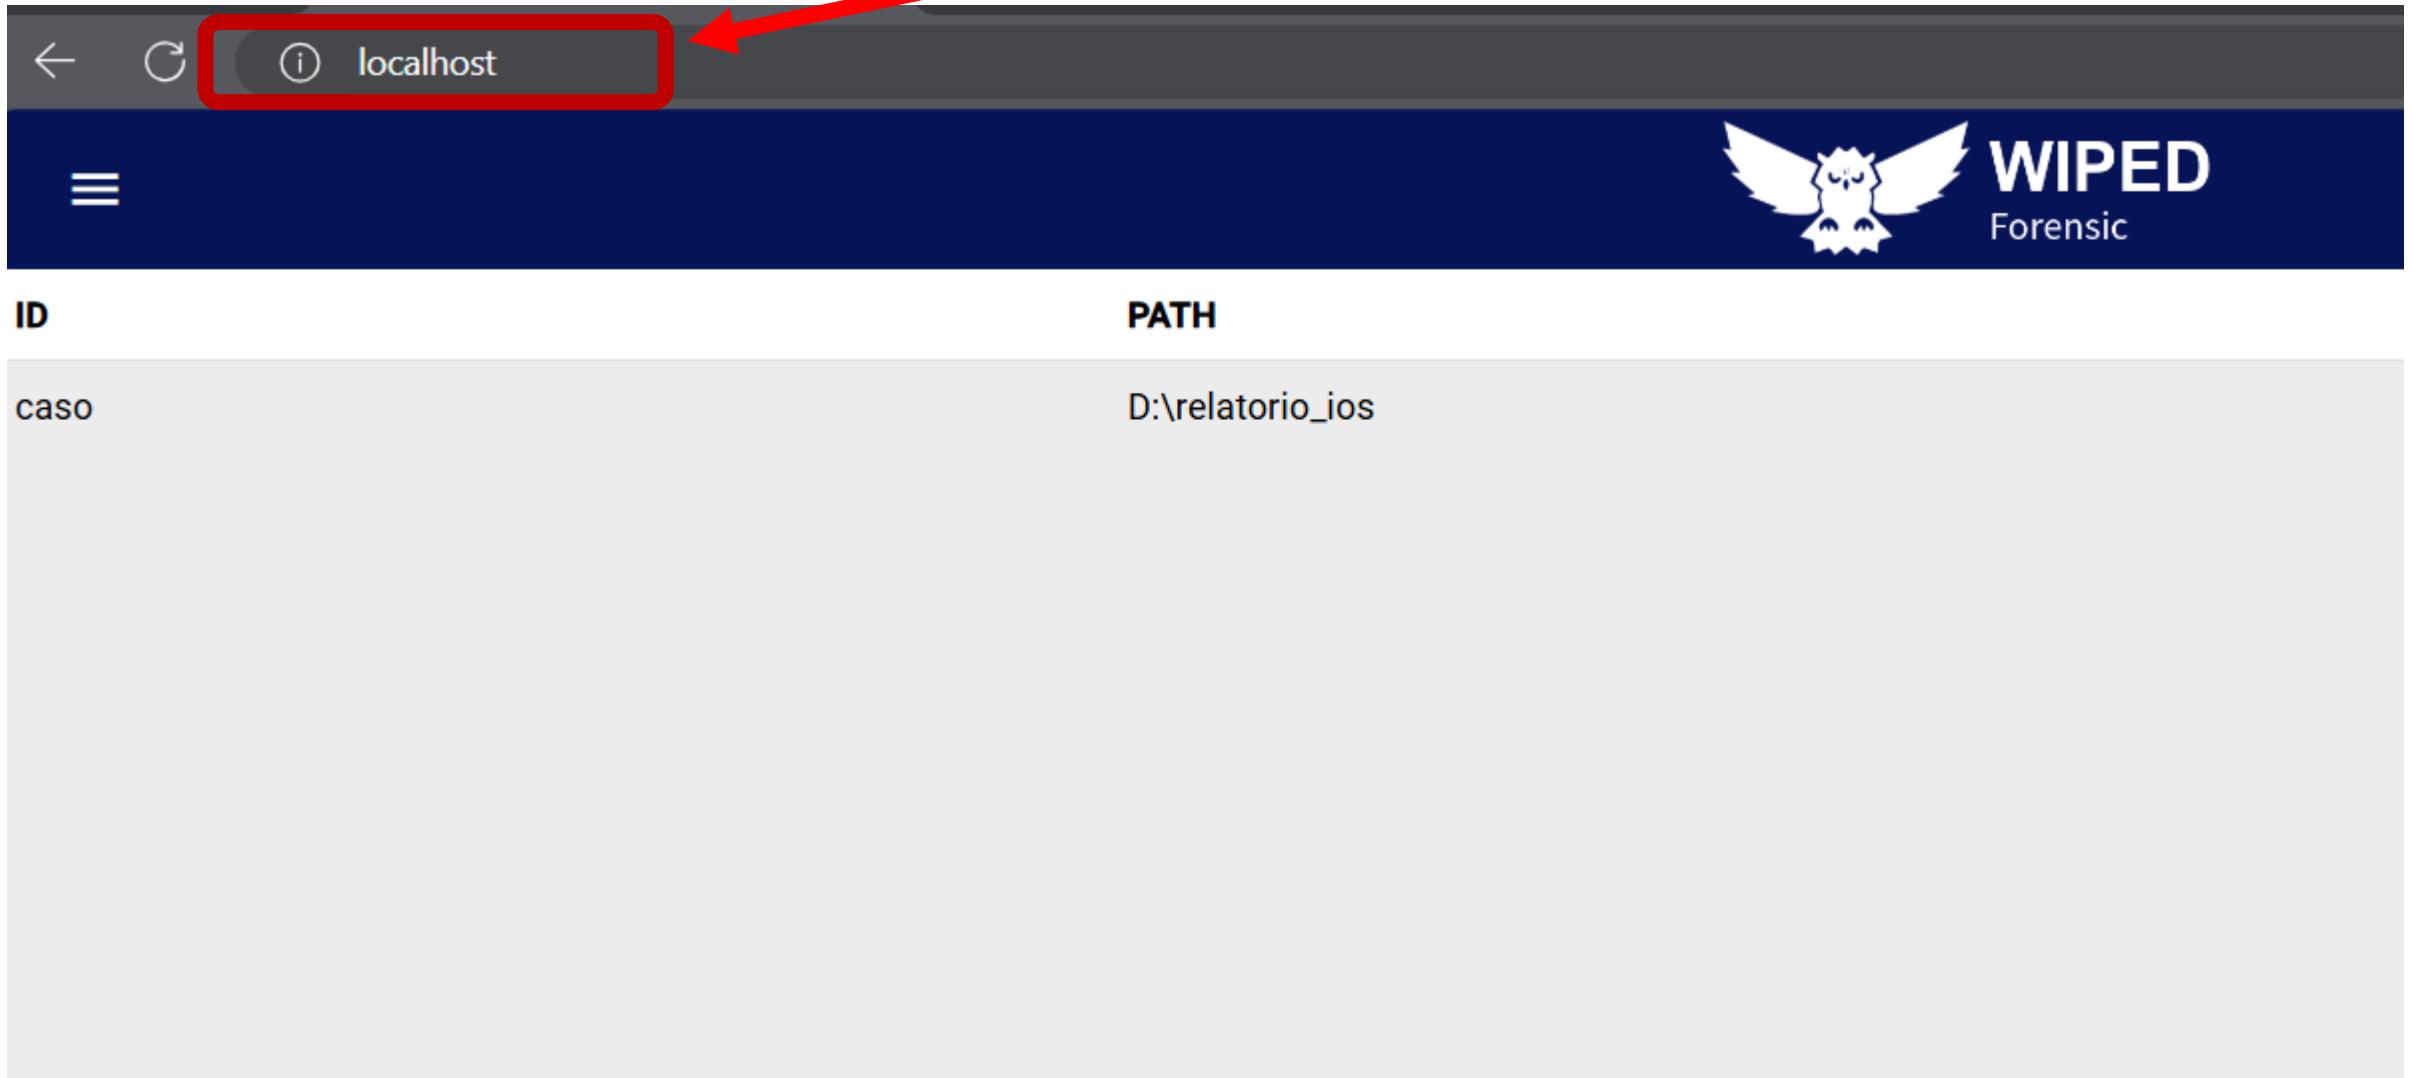

Atenção!!! O nginx não tem interface gráfica. Para saber se ele está em execução precisa conferir pelo gerenciador de tarefas.

Para encerrar a execução do Nginx também deve ser através do gerenciador de tarefas

Após certificar-se de que o nginx está em execução, abra seu navegador e acesse o endereço **localhost**

Se tudo ocorreu sem erros, vai poder acessar o sistema normalmente.
Para acessar seus arquivos, clique no menu e selecione Arquivos

localhost/fileexplorer
